"See Attachment"

The Korean Industrial Property Office

Examining Division IV
Patent Examiner (Sealed)

[Attachment: Application No.95-15104]

1. The invention claimed in Claims 1, 2, 7, 10, 24, 27 and 33 of the present application ("claimed invention") provides a large-screen liquid crystal display by connecting a plurality of TFT liquid crystal panels. Such technical feature of the claimed invention is considered very similar to the Japanese Laid-Open Patent Hei No. 3-256025 (1991. 11. 14: "cited reference 1") and the Korean Laid-Open Patent No. 93-1451 (93. 1. 16: "cited reference 2"), which disclose a large-screen display constructed by connecting the TFT liquid crystal panels.

Also, the elements of the claims, such as a plurality of panels, a TFT, a first photo-blocking film, etc., are very similar to those of the cited reference 1 (i.e., a plurality of panels, a TFT) and the cited reference 2 (i.e., a TFT, a light shield film).

Therefore, the claimed invention is considered easily conceivable by the skilled person in the art in view of the simple aggregation of the cited references 1 and 2 (Article 29, paragraph 2).

2. The term "a predetermined" of a predetermined trace width in Claim 2 is unclear and, therefore, it is difficult to know the range which is sought to be patented (Article 42, paragraph 4).

Enclosure: A copy of the cited references 1 and 2.
